

# New power at sea: marinegas engine

FIRST IN THE  
WORLD

A Special LPG cylinder designed for  
boat engines

Marinegas is a different form of the environment-friendly and economical LPG which is used at sea. The great marinegas engine innovation provides extra energy to the engine. The result of a one year research period, marinegas engine awaits you in order to provide power to your boat's engine.

## Features and advantages of marinegas engine

The marinegas engine system provides power to the boat engine with high standard LPG cylinder designed especially for the challenging conditions at sea. Since it is specific for the engine, it is not suitable for kitchen use as in other cylinder.

## Cleaner Water

Marinegas engine is a system in harmony with the environmental approach adopted in accordance with the Kyoto Protocol, signed by Turkey.

## Savings in costs with economical LPG

Research indicates that LPG provides up to 40% savings compared to gasoline based on boat type, engine power and use conditions.

Savings  
up to  
40%

## Ability to select desired fuel system either gasoline or LPG

The possibility of using the present gasoline powered fuel system allows the user to select the desired system.

## Long engine life

Carbon deposits are decreased in the engine due to the use of LPG, as the engine life is also extended.

## System with proven safety record

Marinegas is a system whose examples are encountered in many European countries.

## Application of marinegas engine to boats

The marinegas engine conversion system is applied to new generation fuel injection, both inboard and outboard 4-cycle marine engines, preferably up to 250 HP.
